

608A E-Pipe Instructions & Tips

The 608A e-pipe is a manual operated pipe with a EGO T threaded adapter at the end of the bowl. It can use any EGO T atomizer, clearomizers or 510 cartomizers. The battery is rated at 900mAh and will take about 2 hours to charge. To charge screw the USB charger on the EGO T adapter and plug it into the A/C adapter that came with the kit. The pipe is shipped in the off mode, to turn it on push the button five times, the led will blink three times and is now on and ready to use. Pushing the button five times when on will turn it off again. The pipe kit comes with two CE4 clearomizers, filling instructions are below.

To fill the CE4 remove the mouthpiece by turning counterclockwise and pulling it off the body. Then insert the needle bottle between the body and silicone stop. Fill to the bottom of the silicone stop with your e-liquid. Remove the needle bottle and replace the mouthpiece by pushing in and tighten clockwise.

Wait several minutes for the wick to get liquid to the heating coil before use. During use tip the CE4 back to keep the wick wet occasionally.
