

T3 Clear cartomizer liquid injection diagram (Bottom Coil)

Do not get liquid in the center tube when filling

EGO T Battery Instructions

The EGO T battery has a five click on-off feature, to turn the battery on push the button five times and the led will blink three times. pushing the button five times again will turn it off. The battery needs to be charged when you receive the kit. To charge screw the USB charger on the battery and plug it into any powered USB port, charge time is about 2 hours. While the battery is charging fill the Atomizing device you are going to use with e-liquid. After charging screw the atomizing device on the battery and enjoy.
